Autopsy document for my website submitted for 5 Aug 202

Preamble

I had to spend time with my wifi supplier, who I just got recently after they cut me off erroneously. However that is resolved now and we are good for the foreseeable future. However this delayed my work which I'm glad to have delivered with this document being the final deliverable.
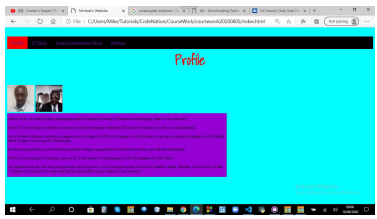

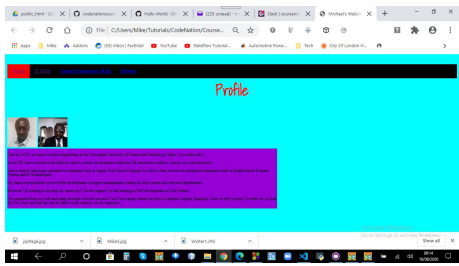

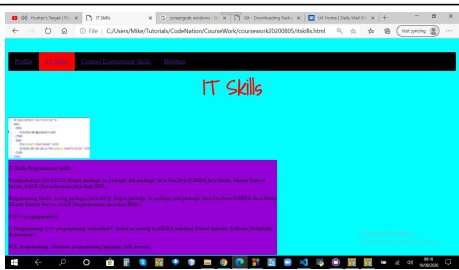

IDE used

I found the Visual Studio Code IDE excellent in making coding life very easy with it's extensive use accelerators. It aided me in making up for some of the lost time in coding. However its integration with git_hub was very disappointing. Instead of a presenting me with a dialog to enter my existing git_hub logon details like I expected it to it directed me to downloading a git client and installing it externally. Then it failed to find the location it was installed on which just wasted time. That forced me to just use the git_hub website instead. Other IDE's I could have used would have been Netbeans, Atom, or IntelliJIDEA however I have gotten used /to Visual Studio Code and continuing to do so would be seamless.

File types used

The file types used here are html, css, jpeg.

Test Table

Test No	Page	What should be tested?	What did happen?	Screen Shot
No. 1	index.html	Open the index.html in **Microsoft Edge**	The profile page opened with my images and profile.	
No. 2	index.html	Open the index.html in **Google Chrome.**	The profile page opened with my images and profile.	
No. 3	itskills.html	Click on the IT Skills tab in navigation bar in **Microsoft Edge**	IT Skills page opens with code snippet images	

No.4.	itskills.html	Click on the IT Skills tab in the nav bar in **Google Chrome**	IT Skills page opens with code snippet images	
No. 5	controlengineeringskill.html	Click on the Control Engineering Skills Tab in **Microsoft Edge.**	Control Engineering Skills page opens with an image.	
No. 6	controlengineeringskill.html	Click on the Control Engineering Skills Tab in **Google Chrome**	Control Engineering Skills page opens with an image.	
No. 7	hobbies.html	Click on the Hobbies tab in navigation bar in **Microsoft Edge.**	Hobbies page opens with an image.	
No. 8	hobbies.html	Click on the Hobbies tab in navigation bar in **Google Chrome.**	Hobbies page opens with an image.	

Strength and Weakness of website

The strength of the website is in my opinion the use of Tabs in the navigation bar and how the color red shows the active bar. I have always wanted to do that but didn't know how in designing website. Thanks to codenation and css.

The weakness is that the website looks too static and could do with and animation of some sort and that I would have like to have nature background pictures instead of single colours.

Link to Git Hub website location.

I load it up on https://github.com/codenationcoursework/coursework20200805 as the Git Hub master repository. I was unsure whether to create separate branches for image and css.
